TRANSPORTATION BACKGROUND REPORT

Background Information pertaining to the Transportation Element may be found in the document “Transportation Master Plan for the City of SeaTac,” which serves as the Background Report for the SeaTac Comprehensive Plan’s Transportation Element.

The Master Plan describes how the Plan was prepared, provides an inventory of existing transportation systems and conditions, and describes the travel forecasts and the process of evaluating system alternatives to accommodate the future demands on the system.

The Master Plan also includes the comprehensive list of system improvements needed to address the population and employment growth anticipated by the City through 2035.

Finally, the Master Plan estimates project costs, anticipated revenues and provides a financing and implementation strategy.
